WHAT'S FIXED IN FRED OFFICE 4.3 (STANDALONE)?

Ability to run Fred Office in multiple windows

This release fixes a change in behaviour that was introduced in Fred Office 4.2, in which Fred Office could not be run in multiple windows. With Fred Office 4.3, you can once again run Fred Office in more than one window on your computer.

When you launch Fred Office and there is already an instance of Fred Office in another window, you will see the following message.

If you click:

- **Yes**—the other Fred Office windows *will be closed* before your new instance begins.
- **No**—the other Fred Office windows *will remain open* before your new instance begins. You will be prompted to provide your **User Name** and **Password**.

Other Improvements

Accuracy of On Order quantity

The **On Order** quantity in **Items** now also includes quantities from PharmX turnover invoices. Previously this value was not included, resulting in incorrect values in the **On Order** field.

Exporting to CSV

The **Export to CSV** command now works as expected. Previously, when users tried to save a report as a CSV file or make use of the **Export to CSV** command, they received an error message.

Label alignment

Label alignment issues have been fixed. Previously some stores were experiencing problems with text getting cut off on the left and right side of the label.
